

WEB ANALYTICS REPORT

Website: King Fahad National Library

1. Business Goals

The primary goal of the King Fahad National Library website is to provide users with easy access to library services, resources, and information. The website aims to help visitors search for resources, register for services, learn about library activities, and access digital content efficiently. In addition, the website seeks to increase user engagement and improve the overall user experience by making information accessible through multiple devices.

Registration page:

The screenshot displays the 'Member Registration' page of the King Fahad National Library. The page has a dark blue background. At the top center is the library's logo, which includes a stylized building and the text 'King Fahad National Library' and 'The National Library of the Kingdom of Saudi Arabia'. Below the logo, the title 'King Fahad National Library' is written in a large, bold, gold-colored font, followed by 'MEMBER REGISTRATION' in a smaller, white, sans-serif font. The main content area is a light gray rounded rectangle. It starts with the heading 'Create your account' in bold, followed by the instruction 'Please fill in your details to access the library.' Below this are four input fields: 'FULL NAME' with a placeholder 'e.g. Ahmed Mohammed', 'EMAIL' with a placeholder 'example@gmail.com', 'ADDRESS' with a placeholder 'Riyadh', and 'PHONE NUMBER' with a placeholder '05xxxxxxxx'. At the bottom of the form is a gold-colored button with the text 'Register & Enter'.

2.Key Performance Indicators (KPIs)

KPI 1: Total Users

KPI 2: Total Sessions

KPI 3: Total Views

Why are these KPIs relevant?

These KPIs are important because they measure the overall performance of the website. Total Users indicates how many people visited the website. Sessions show how frequently users interact with the website, while Views measure the amount of content consumed by visitors. Together, these metrics provide a clear understanding of website traffic and user engagement.

Macro Question 1: How many visitors are coming?

Creating a custom report that shows for a specific period of interest (MAY 31 – JUN 1,2026) the number of sessions, total user and new users.

Analysis and Interpretation

The report shows that the website attracted 86 users and generated 91 sessions during the selected period. This indicates that the website is successfully reaching visitors and generating engagement. The number of sessions is slightly higher than the number of users, suggesting that some visitors returned to the website more than once.

- On May 31, the website recorded approximately 50 sessions.
- On June 1, the number of sessions decreased to around 38 sessions.
- This represents a decline of about 24% in website traffic over the two-day period.
- The downward trend suggests that user activity and visits to the website were lower on the second day.

Macro Question 2: Where are visitors coming from?

Analysis and Interpretation

The traffic acquisition report shows that visitors arrive through several channels. Direct traffic represents a significant portion of visits, indicating that many users already know the website and access it directly. Social media platforms, specifically Snapchat and TikTok, contribute to bringing referral traffic to visitor acquisition, demonstrating the importance of **social media** in helping users discover the website.

The source and medium report provides a more detailed view of traffic origins. Different traffic sources contribute varying numbers of sessions and users. This information helps identify which marketing channels are most effective and where future promotional efforts should be focused.

Analysis and Interpretation

The chart shows the traffic source and medium report for May 31 – June 1, 2026. It indicates how users arrived at the website through different channels:

- Direct traffic (users who typed the URL or bookmarked the site) contributed a large portion of sessions.
- Social media referrals, especially from Snapchat and TikTok, also brought users to the website.
- The lines in the chart show the number of sessions for each traffic source over the two-day period, highlighting which channels are driving engagement.

Macro Question 3: What do you want visitors to do?

The desired user journey on the website is:

1. Visit the website.
2. Explore library information and services.
3. Search for resources and collections.
4. Register for available services.
5. Engage with library content.
6. Return to the website for future use.

Analysis and Interpretation

The website is designed to encourage visitors to access information, interact with library services, and complete important actions such as registration and resource exploration. Successful completion of these actions indicates that the website is meeting its objectives.

Macro Question 4: What are visitors actually doing?

Analysis and Interpretation

The pages report shows the actual behavior of visitors on the website. Certain pages receive significantly more views than others, indicating greater user interest. The Register page appears to attract considerable attention, suggesting that visitors are actively interested in creating accounts or accessing services. This behavior aligns well with the website's intended goals and demonstrates effective user engagement. However, the Register page has a very high Bounce Rate (79.12%), which means most visitors leave without completing registration. This requires user experience optimization.

Landing page report (where users enter the website)

Analysis and Interpretation

The chart shows the landing page performance for May 31 – June 1, 2026. Key observations:

- The /register page received the most sessions (76) and views (135), indicating high user interest in creating accounts or accessing services.
- The home page (/) and other pages received fewer sessions and views, showing lower engagement on informational pages.
- The bounce rate is high on most pages, particularly on /register (76.32%) and home page (83.33%), meaning many users leave without further interaction.
- These insights suggest a need to optimize the registration and landing pages to reduce bounce rate and improve user experience.

Analysis and Interpretation

The device report indicates that most visitors access the website through mobile devices. This finding highlights the importance of maintaining a mobile friendly user experience. Since a large percentage of users browse the website using smartphones, optimizing page speed and usability for mobile devices should remain a priority.

Outcomes by Traffic Source

The engagement report shows how different traffic sources contribute to website performance. Some sources generate higher engagement levels than others. Understanding these differences allows website administrators to focus on channels that bring more valuable visitors and improve marketing effectiveness.

Final Insights

1. The website successfully attracted 86 users and generated 91 sessions during the reporting period.
2. Direct traffic and **social media** are among the most important sources of visitors, indicating strong brand awareness and social media visibility
3. The Register page receives substantial attention, suggesting that visitors are interested in accessing library services.
4. Mobile devices account for the majority of website visits, emphasizing the importance of mobile optimization.
5. User engagement varies by traffic source, providing opportunities for improving acquisition strategies.

Recommendations

1. Continue improving SEO practices to increase organic search traffic.
2. Enhance mobile usability and page loading speed to support the large number of mobile visitors.
3. Optimize the user experience on the registration-related pages to reduce the high bounce rate and increase conversions
4. Monitor traffic sources regularly and invest more effort in channels that generate highly engaged users.
5. Analyze visitor behavior continuously to identify new opportunities for improving user experience and website performance.
